

EFFECT OF CELL-RATE™ ON THE MEAT QUANTITY AND QUALITY

Evaluation of the effect of CELL-RATE™ on the **fattening and slaughter efficiency** (on the basis of "Carré"* yield) of fattened pigs. * "Carré" = **meat cut: side of pork weight. without legs/head**

a) With CELL-RATE™

Slaughter date	Number animals	"Carré"	Weight (total)	"Carré"-yield %
Oct. 18	16	237.1	1295.0	18.31
Nov. 7	16	249.6	1307.1	19.10
Nov. 14	13	195.8	1012.8	19.34

----	45	682.5	3614.9	

b) Control group

Oct. 18	14	205.0	2126.3	18.21
Nov. 7	14	217.9	1163.7	18.73
Nov. 14	17	236.7	1263.5	18.74

----	45	659.6	3553.5	

Difference: **22.9** **61.4**

The slaughter weight of the test animals was **1.73 % higher** than that of the control animals.

The "Carré"-weight of the test animals was **3.47 % higher** than that of control animals.
