

EFFECT OF CELL-RATE™ ON OVERALL PERFORMANCE

The following trial took place at Maywood Park track in Chicago, IL. In this trial the Treatment Group consisted of 59 Standard bred race horses that were fed 5 grams/hd of CELL-RATE™ along with their normal feed. The Control Group consisted of 50 Standard bred horses that were fed their normal feed without CELL-RATE™. The time for Race 1 was recorded for each horse. At the conclusion of Race 1 the Treatment Group received the inclusion of CELL-RATE™ in their feed. Race 2 for each horse was concluded within a two week period. All horses in this trial ran the same distance in both Race 1 and Race 2.

Trial design

TEST RESULTS FROM MAYWOOD TRACK

Results:

- 52.5% of the treated horses ran faster in the second race
- 32% of the untreated horses ran faster in the second race (This is a significant difference (p=0.0244))
- The inclusion of CELL-RATE™ showed a significant improvement in overall performance with the treated horses.
